DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Richard Gallagher 28,781 on April 13, 2004.

The application has been amended as follows:

In the claims:

Cancel claims 10-11 and previously withdrawn claims 13-14.

Allowable Subject Matter

2. Claims 1-9 and 12 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The prior art does not teach nor fairly suggest a sample suction apparatus comprising, a first member, a second member, and a third member capable of linearly reciprocating along the same direction and spaced from each other, the second member being located between the first member and the third member; an elastically compressible spacer inserted between the second member and the third member; a suction needle provided on pointing to the third member; and a single drive source provided on the third member, said single drive adapted to perform: a first action of shifting the first member toward the second member such that the first member makes

Art Unit: 1743

contact with a portion of a specimen vessel while maintaining a predetermined distance between the second member and the third member by elasticity of the spacer; a second action of shifting the second member together with the third member toward the first member until the second member makes contact with another portion of the specimen vessel such that the specimen vessel is sandwiched between the first and second members; and a third action of shifting the third member, against the elasticity of the spacer, toward the first member to bring the third member closer to the second member while maintaining the specimen vessel sandwiched between the first member and the second member such that the suction needle is inserted in the specimen vessel.

The prior art does not teach nor fairly suggest sample suction device that comprises a drive source includes an air cylinder having a piston rod, the air cylinder being provided on the third member and a distal end of the piston rod being connected with the first member nor a washing bath provided in the second member for washing the suction needle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
